## Battery Storage: How It Will Optimise Results from PV Systems

The Energy Innovation Co-operative is proud to present this Community Forum

**When:** Sunday 16 August 2015 at 2:00 pm

**Where:** Inverloch Community Hub  
(Side entrance on Reilly Street, opposite Foodworks)

**Entry:** Gold Coin Donation to cover costs.

**Presenter:** David Leyton, Project Manager, Ampetus Energy

Battery storage is poised to revolutionise PV systems by matching power generation and usage patterns to optimise results. Come and learn how adding storage to a PV (or wind) system will allow you to

- Maximize the value of your generated power and hence return on your investment
- Have emergency power available during power cuts
- Help smooth the load on the grid

All made possible by

- Battery prices falling as new chemistries become available and economies of scale kick in.
- Onerous battery management and maintenance becoming a thing of the past.
- Dangerous/toxic materials inherent in old batteries can now be eliminated.
- The system owner, the environment and the power distribution network all win.

David will tell us how and why!

The presentation will be followed by Q and A and informal discussion.

***This is a topic of interest to everyone who has a PV system installed or would have one installed were it not for the negligible feed-in tariffs available for new installations. Come and learn how significant recent developments in storage technology will deliver these benefits and how system design will change to realize them.***

**An RSVP... to Maddy at [maddyh@eico-op.com.au](mailto:maddyh@eico-op.com.au) / 0414 685 276 or Peter 0415 473 810  
would be much appreciated to help arrange appropriate facilities**
